kabirkenth.me | linkedin.com/in/kabirkenth | github.com/KabirKenth

Software engineer, McMaster B.Eng. (Nov 2025). Three systems I built run in production: an LLM job-application platform, a daily Airflow and BigQuery pipeline, and a two-sided freight marketplace. Years of bookkeeping and freight dispatch came first, which is why I build tools that take manual re-entry out of a process.

EXPERIENCE

Software Engineer Intern

Bulk Buys | Brampton, ON | Jan 2023 - Apr 2023 | e-commerce SMB

- Built a Python integration that synced Amazon repricing data into Zoho One, ending a manual re-entry task that had been costing roughly **\$6,000 a year** in staff time.
- Containerised the team's Python services in Docker, which cut environment setup time and put a stop to the machine-specific failures we kept hitting.

Dispatch and Data Entry Clerk

Fortel Express | Ontario | Summer 2022

- Keyed and reconciled bills of lading, dispatch records and driver logs across systems that shared no common load identifier. One mis-keyed load number could hold an invoice for weeks. FreightSwipe came directly out of this job.

Bookkeeper and Office Administrator

2512484 Ontario Inc. | Brampton, ON | Sep 2014 - Mar 2020 | family business

- Kept the books and owned client relationships end to end for five and a half years, run alongside full-time engineering study.

Earlier Experience

Retail Operations | Costco Wholesale | 2021

Operations Manager | Benchmark Sports | 2019 | contract

Assembly Line | FCA Fiat Chrysler | 2016

PROJECTS

ApplyTron: LLM Job Application Platform

Live at app.kabirkenth.me | 2026 | Next.js, TypeScript, Supabase, Claude API, Playwright, Vitest, Railway

- Ingests job listings, scores each one against a parsed resume with the Claude API, and generates a tailored ATS-safe PDF through react-pdf. Multi-user and authenticated.
- No document reaches an employer without a person approving it first. The gate is a guarded state machine sitting behind row-level security in Postgres.
- A Playwright worker on Railway fills and submits application forms, screenshotting each one for review before it submits. Vitest covers the security boundaries and the business rules.

Market Sentiment Pipeline: Daily ELT and Signal

2026 | Python, Apache Airflow, BigQuery, Gemini, Docker, Looker Studio

- A containerised Airflow DAG pulls market data and financial news for S&P 500 equities every day.
- Reruns and backfills cannot double-count. Loads merge into BigQuery on a natural (ticker, date) key rather than appending.
- Gemini turns the news into sentiment scores that feed a Random Forest model. Predictions are stored next to outcomes, so accuracy stays visible in Looker Studio.

FreightSwipe: Two-Sided Freight Matching Platform

Live at freightswipe.vercel.app | 2025 - 2026 | React 19, Express, PostgreSQL, Prisma, Playwright, Vercel

- One load record that both sides read from, which removes the two-copy reconciliation I used to do by hand at Fortel. A load only reaches in-transit after the shipper and the trucker have each confirmed it.
- The React bundle and the Express API deploy as a single Vercel app so the auth cookie stays first-party: no SameSite=None, no CORS preflight, no second cold start.
- A read-only Playwright smoke suite signs in as each role and checks that all 16 routes actually render, not just return 200. It exits non-zero, so a blank page blocks the merge.

EDUCATION

B.Eng., Software Engineering and Management

McMaster University | Hamilton, ON | Graduated Nov 2025 | Algorithms, Data Structures, Cloud Computing, Database Systems

- Capstone: Teamfill, a React and Firebase platform matching athletes to pickup teams, built by a team working in Scrum.

TECHNICAL SKILLS

Languages and Data: Python, TypeScript, JavaScript (ES6+), SQL, PostgreSQL, BigQuery, Prisma

Backend and Pipelines: Node.js, Express, REST APIs, Apache Airflow, ETL/ELT, JWT and httpOnly cookie auth, bcrypt, Joi validation, rate limiting, idempotent loads

Cloud, Frontend and Testing: GCP, Docker, Vercel, Railway, Supabase, Firebase, React, Next.js, Playwright, Vitest, CI/CD, Agile (Scrum)
